Introduction

Purpose

Lighthouse Aided Dispatch (LAD) is Lighthouse's Tasking & Dispatching System. It has been designed to provide increased capabilities in managing incidents and tasking during emergency operations within Beacon.

LAD has been designed with three balanced guiding principles:

- Provide as much information as possible to support informed decision making.
- Allow for as many action to be performed within LAD.
- An intuitive interface.

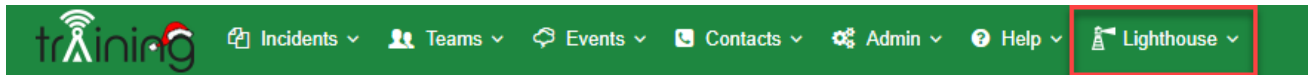

Note that this guide may contain images from different versions of Beacon (Production/Live Beacon and Train beacon). All functions should work identically in any version of Beacon, but the data available to LAD will be dependent on what version of beacon LAD is opened from.

Introduction

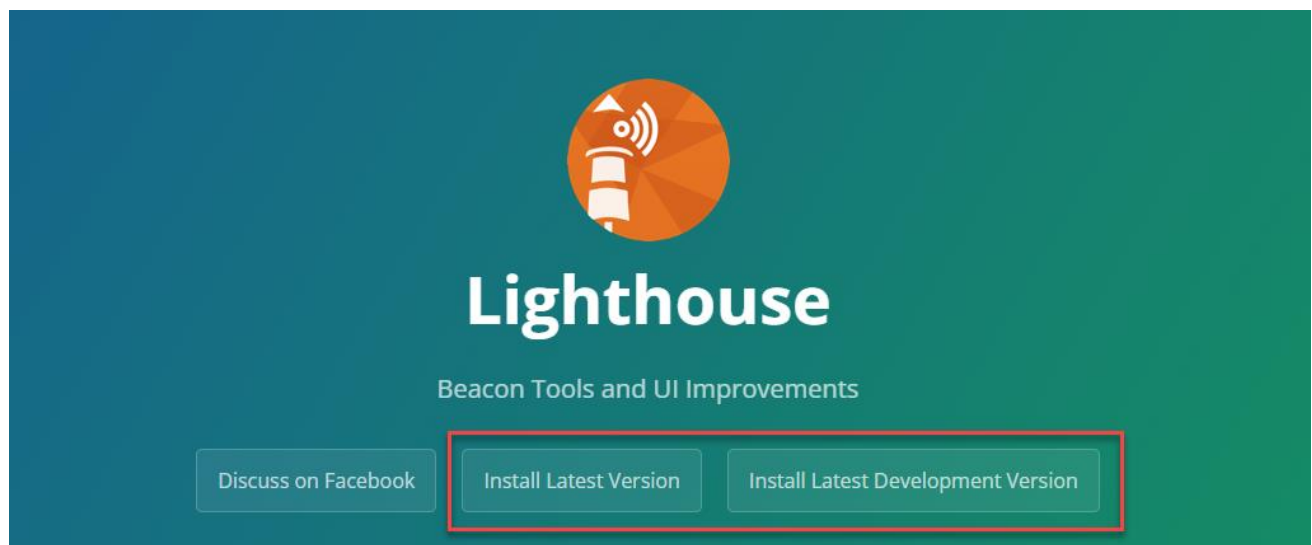

Installing Lighthouse

Lighthouse should be automatically installed on all SES devices. If Lighthouse is installed, the Lighthouse navigation menu will be visible.

If you are on a device that does not have Lighthouse installed, you will need to navigate to <https://lighthouse.ses.nsw.gov.au>. You can then install the latest version, or the latest development version.

- Latest Version
 - Suitable for use in operations. This version is stable and is less likely to have bugs.
- Latest Development Version
 - This version receives the latest updates to Lighthouse before they are published to the Latest/Stable version. The Development version is the first to receive the latest features and bug fixes and is considered 'Unstable' as it may contain bugs which have not yet been identified and fixed.
 - The Development Version is not recommended for use in operational contexts. It is important to verify that Lighthouse functions are working as intended.

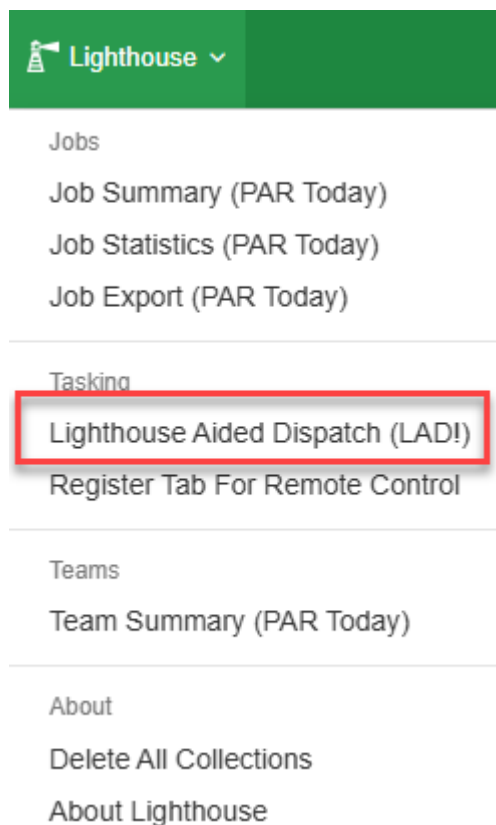

LAD Overview

Launching LAD

To launch LAD, navigate to the 'Lighthouse' navigation menu in Beacon and select 'Lighthouse Aided Dispatch (LAD!)'. This will open LAD in a new browser tab.

Remote Beacon Tab

As LAD does not contain all Beacon functions, there is still a need to access Beacon for certain functions. To streamline this process, a remote tab feature is available to direct LAD to which tab you would like these incidents or filters to open to. When opening an incident or team from LAD, this allows you to specify which tab, in which browser or screen to open Beacon in.

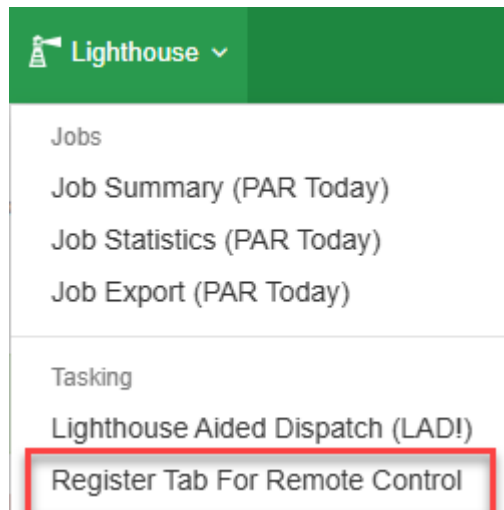

Setting the Remote Tab

Open Beacon in a new tab. Under the 'Lighthouse' navigation menu, click 'Register Tab for Remote Control'. That tab will now be set as the 'Remote Tab' for LAD.

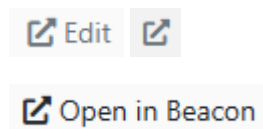

LAD Overview

This will work in split screen mode, a different browser tab, or a different browser window. It must, however, be the same browser application that LAD is open in. You cannot set the Remote Tab in Edge, if LAD is open in Chrome (and vice versa)

Opening pages in the Remote Tab

In LAD, buttons allow for the selected item to be opened in the full beacon page, in the remote tab. These can be identified by the following 'Open in remote tab' icons.

When you click the 'Open in remote tab' button, the item you are wishing to open externally (an incident or team) will now be opened in the Remote tab that you have set previously.

LAD Overview

Configuring LAD

Configuration & Filters

When you first launch LAD, you will be directed to the LAD ‘Configuration’ screen. In this screen you will be able to configure a range of settings and filters applicable to LAD.

Data Settings

The Configuration page will open the “Data” settings tab. The Data settings tab allows you to set the primary filters that govern what data is synced in LAD.

Headquarter Filters

In the headquarters filters you will be able to filter your teams and incidents to specific headquarters. If you have no headquarters selected, data from all headquarters will be synced.

You can have different HQ filters for incidents and teams. It is **recommended** for normal operations to have these values identical.

LAD Overview

Only Load Teams Attached To: 1 Clear

Parramatta

Only Show Incidents From: 1 Clear

Parramatta

Adding Headquarters

You can add a headquarters by typing in name of the Headquarters into the search field. When you find your desired headquarters, click anywhere on the headquarters name to add it both into the Incidents & Teams filters. If you want to only add it into the Teams OR Incidents filter, click one of the respective button at the right-hand side of the row.

Filter by Headquarters

Parramatta

Parramatta Teams Incidents

Expanding Headquarters

If you select a Zone headquarters, you will have the option to expand the headquarters to include all units under the zone. This feature works identically to the zone expand feature in the Beacon headquarters filter.

Metro Zone

Clearing Headquarters

If you want to remove a headquarters from either filter, you can click the cross against that specific headquarters. If you would like to remove all headquarters, click the 'Clear' buttons above the list of the selected headquarters.

Only Load Teams Attached To: 1 Clear

LAD Overview

Full Refresh Interval

The Full Refresh Interval determines how often a full reload of data from Beacon occurs. The default value is three (3) minutes. When you have Live Updates turned on, you should not need to sync more often than three (3) minutes.

History Setting

The History setting determines how far back to load data from. The default value is one (1) week, this means incidents and teams older than one (1) week will not be synced into LAD.

Lookahead Setting

The Lookahead setting determines if incidents or teams created in the future should be synced into LAD. The default value is 'None'.

Live Updates

When information is updated in Beacon, the updated information is pushed directly into LAD. This allows for near real-time updates to incidents, teams and tasking statuses.

Note: When using Live Updates, it is important to keep the Full Data Refresh value between 3-5 minutes. This will pick up any information missed by Live Updates.

LAD Overview

Filter Settings

The Filter Settings tab allows you to implement more granular controls on which Incidents and Teams are synced into LAD. You can apply filters against the Incidents, Teams and Sectors.

Incidents

In the Incidents filters section, you can control what statuses and what types of incidents are synced into LAD. Only incidents statuses **AND** types that are selected will be synced.

Show Incidents With Status:

- ☒ New
- ☒ Active
- ☒ Tasked
- ☐ Complete
- ☐ Finalised
- ☐ Cancelled
- ☐ Referred
- ☐ Rejected

Show Incidents Of Type:

- ☒ Storm
- ☒ Flood Rescue (FR)
- ☒ GLR
- ☒ VR
- ☒ Resupply
- ☒ Fodder Drop
- ☒ Flood Misc
- ☒ Evacuation Secondary (B)
- ☒ Transport
- ☒ Support
- ☒ RCR
- ☒ CFR
- ☒ LAR
- ☒ Medical Resupply
- ☒ Vet Assistance
- ☒ Evacuation Priority (A)
- ☒ Welfare Check (B)

Teams

In the Teams filter section, you can control what team statuses, types and what tasking statuses are synced into LAD. Only Teams with the selected Status **AND** Type will be synced.

Taskings will only be displayed under teams that meet the selected tasking status types.

 Teams 

Show Teams With Status:

☒ Activated
☐ Standby
☐ Stood down
☐ Rest
☐ On Alert

Show Teams Of Type:

☒ Field
☐ Operations
☐ Aviation

Show Teams Tasking With Status:

☐ Untasked
☒ Tasked
☒ Onsite
☒ Offsite
☒ Enroute
☐ Complete
☐ CalledOff

Sectors

LAD Overview

In the Sectors filter settings, you can control what incidents and teams appear based on what sectors they are in.

Sectors

Apply sector filters to:

☐ Incidents ☐ Teams

Overrides:

☒ Include items without a sector

Filter by Sectors:

Clear all

☐ LAD TEST SECTOR

You can select whether the sector filters are applied to Incidents **AND/OR** Teams by ticking the respective tick boxes.

Apply sector filters to:

☐ Incidents ☐ Teams

The “Include items without a sector” override is on by default. This override will always ensure incidents and teams that are not assigned a sector, will be synced into LAD.

Overrides:

☒ Include items without a sector

You can filter by selecting the sectors you want to be synced into LAD. Only Sectors for the Headquarters you selected in “Data Settings” will be available for selection.

LAD Overview

Map Markers

The Map Markers settings controls how incident markers are displayed on the map, as well as the order in which layers and icons should be displayed on the map.

Incident Marker Clustering

☒ Enable marker clustering

Groups nearby incident markers into numbered clusters that expand on click.

Cluster radius: **60px**

Tight Aggressive

How close markers must be (in pixels) to be grouped into a cluster. Lower values keep markers separate; higher values merge more.

☒ Include Rescue incidents in clustering

When enabled, Rescue priority incidents cluster with other markers.

Marker Layer Order (top → bottom)

Controls the draw order of marker layers on the map. Drag and drop to reorder.

Incident markers

Collaborative layer markers

Asset markers

Map overlay markers & labels

Map overlay polygons & drawings

Incident Status on Markers

☒ Show job status on incident markers

Styles incident markers by job status: Active gets a magenta ring, Complete / Referred / Finalised are struck through, Cancelled / Rejected are crossed out, and jobs with an action-required tag get a red exclamation dot. See the map legend for the full key.

Incident Marker Clustering

The Incident Marker clustering features, when enabled, allows for markers to group together when close enough on the map, reducing the map clutter.

You can control how close the markers must be to be clustered by moving the slider bar. The default setting is '60px'. Lower values keep markers separate and higher values cluster more.

You can also control if rescue incidents should be included in clustering by using the 'Include Rescue Incidents in Clustering' toggle box.

You can read more in the [Incident Clustering](#) section.

Incident Status on Markers

When enabled, LAD will display extra icons on the incident icons markers on the map to allow for the easy identification of incident status, and incidents where an unresolved action required tag is present.

You can read more in the [Incident Status on Markers](#) section.

LAD Overview

Marker Layer Order

This controls the order in which map elements will display on the map. Items at the top will display over items lower down the list. You can drag to re-arrange the order.

Collaborative Layers

Collaborative Layers allow for custom map markers, which can be viewed by other users. Multiple collaborative layers can be created, viewed and edited simultaneously.

 **Collaborative Layers** 

Shared marker layers that everyone in your organisation can see and edit together. Create one, or find one below and subscribe to add it to your list. Use the  Layers button on the map to actually show/hide a layer you've subscribed to — once visible, right-click anywhere on the map to drop a marker on it. Layers unused for 120 days stop appearing in search, but their data isn't deleted.

[+ New layer](#)

You haven't subscribed to any layers yet — create one above, or find one to subscribe to below.

Selecting a Layer

You can subscribe to a layer by selecting it. You will need to click the 'Find a Layer' button. You will then see a list of all layers for the selected Headquarters. You can click the 'X' to remove the headquarters and either select a different headquarters, or leave it blank to search across all headquarters.

You can subscribe to the desired layer(s) by clicking the 'Subscribe' button next to the layer.

 **Parramatta**
 Parramatta
by Dykes, Tim · 0 markers · used 17d ago

[+ Subscribe](#)

Creating a New Layer

You can create a new layer by clicking the 'New Layer' button. You will then need to enter a layer name and select what Headquarters the layer belongs to.

You can expand the 'Advanced options' menu to get additional settings.

- Attach to event
 - Allows you to attach a layer to a specific event number.
- Marker Permissions
 - Controls who can add, modify and delete markers on the collaborative layer.
- Delete permissions
 - Controls who can delete the collaborative layer.
- Comment permissions
 - Controls who can leave comments on markers on the collaborative layer.

LAD Overview

If you select any settings the give permissions to moderators, you will also see a box to add and remove moderators to the layer. You can add by searching for their name or member number.

LAD Overview

Appearance

In the appearance setting you can control the look of LAD, as well as other miscellaneous settings.

Theme

Light Dark Auto

A low-glare dark colour scheme for the whole board and map.

Auto-collapse alert popups

☒ ON

New alerts start collapsed in the Alerts panel.

Count active taskings only

☐ OFF

Incident tasking count excludes Complete, CalledOff & Untasked.

Command palette hotkey

Ctrl+K [Reset](#)

Opens the command palette (search teams, incidents & jobs) from anywhere on the page. Click, then press the new key combo.

Theme

The theme setting allows you to pick if you want to use light mode, dark mode, or auto (depends on your browser settings)

Auto-collapse alert popups

If you enable this setting, all alerts start collapsed when you load the page.

Count active taskings only

When enabled, 'Completed', 'CalledOff' and 'Untasked' statuses will not count towards a team's tasking count.

Command Palette Hotkey

This controls the key-bind used to open the Spotlight command menu.

Read more in the [Spotlight Menu](#) section.

LAD Overview

Instant Task Suggestions

When enabled, smart team suggestions will appear when tasking an incident. It is designed to suggest the most appropriate resource (**not account for team capabilities**).

It provides a suggestion based off the distance and tasking count of a team.

When enabled, the instant-task dropdown will suggest a team using a rule-based engine. The suggested team appears at the top of the list with a  icon.

☒ Enable team suggestions

☐  Use road travel times

When enabled, suggestions use Lighthouse road routing for actual driving times instead of crow-flies distance. The dropdown loads instantly with haversine distances, then updates when travel times arrive.

Rules

- **Rescue priority:** Prefer the *nearest team with zero active taskings*. If all teams already have taskings, fall back to weighted scoring below.
- **All other priorities:** Score every team using a weighted combination of distance and tasking count, then suggest the highest-scored team.
- **Road routing:** When enabled, travel times from Lighthouse Location Service replace crow-flies distance for more accurate ranking.

Rescue

Weights

Distance: **90%**

Low  High

Tasking count: **10%**

Low  High

For Rescue jobs, idle teams (zero taskings) are always preferred first. These weights apply when all teams have at least one tasking.

Standard

Weights

Distance: **50%**

Low  High

Tasking count: **50%**

Low  High

For non-rescue jobs (Immediate, Priority, General). Balances proximity with how busy each team already is.

Use Road Travel Times

When you use road travel times, the distance weight will come from an estimated driving distance, instead of a straight line (as the crow flies) distance.

Weights

You can set the weights individually for Rescue and Standard (non-rescue) incidents. You can control the important of Distance vs Tasking Count.

For example, the default Rescue Weights prioritises a low tasking count over distance. This means it may suggest a team that has no tasking, but is further away, over a closer team with tasking.

LAD Overview

Sharing Configurations

Next to the Submit' button are two buttons 'Share' and 'Load'. Clicking Share generates a code that saves the specific filters and settings you have set. You can then click 'Load' to enter the code and load the saved filters. This is useful for sharing your configuration & filters to other users.

 Share

 Load

Go

Cancel

Restoring Default Settings

Clicking the 'Restore Defaults' button will restore all filters and configuration settings back to their default settings, as well as removing any starred incidents and teams.

 Restore Defaults

LAD Overview

Setting up a Team for Radio Tracking

LAD relies on the beacon team name for determining the correct radio to track. Where a callsign in a team name is an exact or similar match to a PSN radio, that radio will be tracked to that team. Radio Asset names can be searched for in the [Trackable Assets Library](#).

Key Points:

- Radios will be matched against Teams via their PSN Radio Name.
- Each team will have a **primary matched asset** which will be utilised for location-based features like tasking suggestions.
 - This is indicated in the [Expanded Team Register](#) as the Matched Asset with the star against it. It can be changed by the user and is synced to all LAD Browsers.
- Each Team can have multiple radios attached to it.
 - To do this, include both callsigns within the Team name.
 - E.g. "PAR56 + PAR913" will work – both radios will be tracked against that team (if they exist and match the PSN Radio Name).
- Exact matches will take priority.
 - If the PSN Radio Name is "PAR56" and the team's name includes "PAR56", it is an **exact match** and will be tracked.
- If there is no exact match, it will be matched to the closest radio asset name.
 - If the PSN Radio Name is "PAR32" and the team's name includes "PAR 32", it will match as it is the **closest match**.
 - If the team's name is "PAR3", it will match with the closest radio asset name, which could be "PAR31", "PAR32" or "PAR33".
- Each Callsign in a Team name can only be matched once.
 - If the team's name includes "PAR3" and the closest match is "PAR31" it will only track the "PAR31" radio.
- Team's names can still contain non-radio asset text.
 - Note that if any text within the Team's name is similar enough to a radio asset name, it will match.
 - E.g. "PAR56 + PAR741 – Day Shift 2 IWO" will work.

Examples:

"PAR-56 + PAR741" will match to PAR56 vehicle radio and PAR741's boat radio. Likewise, "PAR56 & PAR741" and "PAR56 Response with vessel PAR741" will also work.

'Parramatta 56 + Parramatta 741' will not match as there is no PSN radio like 'Parramatta 56' or 'Parramatta 741'

LAD Overview

Unmatched Teams

Teams that do are not linked to a radio asset will display a location marker with a cross through it. In addition, the focus button will be greyed out.

If experiencing radio matching issues

Initial Troubleshooting:

- Confirm the Team is Activated in Beacon.
- Confirm the Team is appearing in the LAD Team Register.
- Confirm the name of the radio the team is trying to match against in the [Trackable Assets Library](#) under the Team Register Filter menu.
- Confirm the Radio is turned on.

Incorrect/Non-Standard Radio Names:

In some cases, radios may have a name that do not conform to the typical format that is used across the state. If you are having trouble setting up a team for radio matching, and the name meets the label standards, you can check to confirm the radio name. If you enter the 'Layers' menu, under 'Assets' enable the layer 'Unmatched against Teams'. This layer will display all recently active radios, where you will be able to confirm the name of the radio and update the team's name accordingly.

You can also check the [Trackable Assets Register](#) from the Team Register Filter menu.

Radios not reporting location:

Radios can experience issues not checking in and updating their GPS location. If you experience this issue it is recommended to contact Service Desk. As a temporary fix for vehicle radios, teams can turn on a portable radio, and you can add that portable radio's name to the Team name, which will then track the portable radio. Make sure the Portable Radio stays on even when in a vehicle (volume can be turned down to the lowest setting whilst the radio still stays on).

LAD Overview

Interface Overview

The LAD Interface is broken into two core components: the side-draw and the situation map. The divider between sections can be resized, and well as the side draw completely hidden to get a full screen map by clicking the “<<” button on the map.

Side Draw

- Team Register (Top)
 - Lists all filtered teams, their taskings and provides actions against those teams.
- Incident Register (Bottom)
 - Lists all filtered incidents, incident details and provides actions against those incidents.

Situation Map

- Situation Map
 - Displays all filtered incidents and filtered teams, and allows for actions to be taken against those incidents and teams. Layers are also available to display additional map information.

The screenshot displays the LAD interface. On the left is the Side Draw, and on the right is the Situation Map.

Side Draw:

- Teams (2):** A table with columns: Callign, Status, HQ, Task Count, Team Leader, and Actions. It lists two teams: PAR31 (Activated, PAR, 0 Active, Rowan Macdonald) and PAR56 + PAR914 (Activated, PAR, 0 Active, Tim Dykes).
- Incidents (44):** A table with columns: Id, Receiv..., H., T., Situation, Status, and Address. It lists four incidents: 14-0154 (a duck in rapidly rising water), 14-0153 (Please drop food), 14-0149 (Fodder Drop), and 14-0148 (20 CATTLE ON SITE REQUIRING FODDER).

Situation Map:

- A map of Parramatta, NSW, showing incident locations marked with colored icons (red, yellow, green, blue).
- A legend in the bottom left corner of the map area.
- A summary panel in the top right corner of the map area showing: Unacknowledged incidents (21), Untasked incidents (2), Incidents missing geolocation (4), and Incidents pending completion (5).

LAD Overview

Register Controls

In the Team and Incident registers, a common set of actions are available:

- Toggle Starred
 - Toggles whether the register will display all filtered incidents/teams or just pinned incidents/teams.
- New Ops Log Entry
 - Opens the New Ops Log Entry dialog. This will not be automatically attached to an incident.
- New Radio Log Entry
 - Opens the [New Radio Log](#) dialog. This will not be automatically attached to a team or an incident.
- Filter Settings
 - Opens a list of filters relevant to the register you opened the filter for (Teams or Incidents).
 - In the Team Register Filter dropdown, you can also open the [Trackable Asset Library](#) which displays the details for all SES Radios.
- Refresh Data
 - Refreshes the data for that register.
- Page Configuration (right)
 - Opens the 'Page Configuration' menu.

Each register also has a collapse all button which collapses all teams/incidents in that register.

Alerts

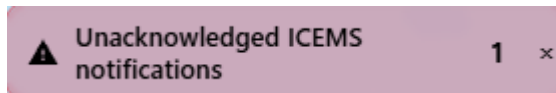

In the top right corner of LAD, a series of alerts will display under certain circumstances.

- Unacknowledged Incidents
 - Displays all filtered incidents in the 'New' status.
- Untasked Incidents
 - Displays all filtered incidents in the 'Active' status that have not had any taskings on them.
- Unacknowledged ICEMS

LAD Overview

- Displays all filtered incidents with an unacknowledged ICEMS message.

- Incidents Pending Completion

- Displays all incidents where all teams have been completed but the incident is still active. This flags incidents that potentially can be closed if no further action is required.

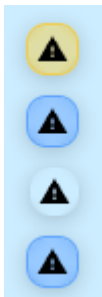

- Incidents missing geolocation

- Displays a list of all incidents that have not been created with a geocoded (GPS) address. These incidents will not be displayed on the map as they do not have GPS data.

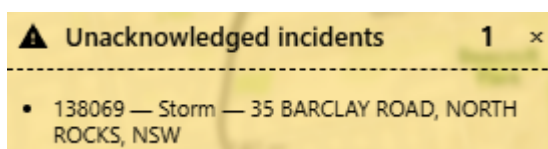

Managing Alerts

Alerts can be minimised by clicking the cross on the right hand of the alert message. It can be re-opened at any time and will not dismiss any of the alerts. The alert will automatically re-appear if an additional incident meets its condition. E.g. a new unacknowledged ICEMS message.

Selecting Alerts

The Incident Text in the Alert list can be clicked on to select the alerted incident in the Incident Register as well as focusing the Situation Map to the incident.

LAD Overview

Trackable Assets Library

The Trackable Asset Library can be opened from the filter dropdown in the team register. The library contains a list of all SES PSN Radios. It can be used to confirm the details of radios. A common use of it is to find the programmed radio name (to use for [Team Tracking](#)) by searching for the PSN ID.

Each radio entry will display:

- Radio Asset Callsign
 - This is the name programmed to the radio.
- Assigned HQ
- Capability
- Radio Type
- Current Talkgroup
- PSN Radio ID
- Time last seen
- Vehicle Registration (where applicable)

The library can be searched by entering a callsign, unit or zone name, or PSN Id into the search field at the top.

Trackable Assets Library

This list shows all possible trackable assets (seen within the last 14 days). Its just a helper to lookup asset callsigns by name, PSN ID, Talkgroup, Unit etc. If you can't find it here, it won't be trackable.

Search by callsign, unit or PSN radio ID...

Lighthouse Aided Dispatch (LAD) Learner Guide – V1.6

24

LAD Overview

Common Functions

Dialog Controls

In LAD there are multiple dialogs that can be opened, such as creating a new radio log, new ops log and the incident timeline. These dialogs have common hotkeys that can be used to quickly complete or close the dialog.

- Ctrl/CMD + Enter - Submits the dialog.
- Escape Key (ESC) - Closes the dialog.
- Ctrl/CMD + K – Opens the Spotlight Search Menu (can be changed in the [Configuration Screen](#))

Spotlight Menu

The Spotlight Menu can be opened by pressing “Ctrl/CMD + K”. When opened, you will be able to search for incidents and teams that are within your LAD Filters. Selecting a search result will take you to the respective incident or team in the relevant register and zoom to that location on the map (if displayed on the map).

Searchable Incident Fields:

- ID
- Type
- Status
- Assigned HQ
- LGA
- Assigned Sector
- Address.
- Tags
- Situation on Scene.
- Caller’s & Contact’s details.

Searchable Team Fields:

- Callsign
- Assigned HQ
- Team Leader’s name
- Team Member’s names.

LAD Overview

Spotlight Commands

The Spotlight menu also allows for commands to be entered to increase the efficiency of operations. Commands typically consist of typing the command name (e.g. task) then providing the required information.

Task Team Command

In the Spotlight Menu, type in 'task'. When you have entered the command name, the command instructions will appear under the search box.

task

team...

incident

task <team> <incident> (either order) — select first argument

To task a team to an incident via the Task Spotlight Command you will need to provide the team and incident. It does not matter which parameter you supply first.

For the purposes of this example, we will provide the team first.

Start typing in the team's name after task. LAD will attempt to match your text to a team. You need to enter enough of the team's name that LAD only matches it against one team. Once LAD has matched to a team, the 'team' section on the command instructions will turn green and you will be instructed to now provide an incident. You can enter the whole team's name, a portion of the team's name, or select the team from the search results.

You can also search for teams based on any [Searchable Teams Field](#).

task

PAR31 — Parramatta

incident...

Team matched (PAR31). Now select an incident.

Now that the Team has been selected (indicated by the green team name) you can now search for an incident. You can search for an incident using any of the [Searchable Incident Fields](#), such as Incident ID and Address. When the Incident field turns green, it has matched to an incident.

task

PAR31 — Parramatta

0013-9662 — New — Storm

Press Enter to task.

Once you have correctly entered both fields, press 'Enter' to confirm and open the tasking menu.

Radio Log Command

LAD Overview

In the Spotlight Menu, type in 'radio'. When you have entered the command name, the command instructions will appear under the search box.

radio

team...

incident

radio <team> <incident> (either order) — select first argument

To create a radio log against a team on an incident via the Task Spotlight Command you will need to provide the team and incident. It does not matter which parameter you supply first.

For the purposes of this example, we will provide the team first.

Start typing in the team's name after radio. LAD will attempt to match your text to a team. You need to enter enough of the team's name that LAD only matches it against one team. Once LAD has matched to a team, the 'team' section on the command instructions will turn green and you will be instructed to now provide an incident. You can enter the whole team's name, a portion of the team's name, or select the team from the search results.

You can also search for teams based on any [Searchable Teams Field](#).

radio

PAR31 — Parramatta

incident...

Team matched (PAR31). Now select an incident.

Now that the Team has been selected (indicated by the green team name) you can now search for an incident. You can search for an incident using any of the [Searchable Incident Fields](#), such as Incident ID and Address. When the Incident field turns green, it has matched to an incident.

radio

PAR31 — Parramatta

0013-5998 — Tasked — RCR

Press Enter to open Radio Log.

Once you have correctly entered both fields, press 'Enter' to confirm and open the [New Radio Log Popup](#).

Ops Log Command

LAD Overview

In the Spotlight Menu, type in 'log'. When you have entered the command name, the command instructions will appear under the search box.

log

incident...

log <incident> — select an incident

You will need to select the incident you want to create a ops log entry against by selecting it on the list. You will be able to search by that incident's details such as address, situation on scene, headquarters and incident ID.

Once you have selected an incident or entered an incident ID the incident parameter will turn green indicating it has matched to an incident. You can now press 'Enter' to confirm and open the New Ops Log Popup.

log

0014-4927 — Active — Storm

Press Enter to open Ops Log.

Ops Log — 0014-4927

Open new Ops Log modal

Create Log

Starring Incidents and Teams

In each register you can star incidents or teams. The register can then be toggled between displaying all filtered incidents/teams (default) and only showing starred incidents/teams.

You can star or un-star an incident or team by clicking the star button on the register. When starred, the star button will appear larger.

LAD Overview

New Radio Log

When you click the 'Radio log' button, the 'New Radio Log' popup will open. The title of the popup will contain the team's callsign, and an incident ID if it is opened against an incident.

If you click the radio log button against a team on an incident, it will automatically be created against that incident. If you click the radio log button against the team, it will not be associated against an incident.

New Radio Log for PAR31 on 0013-8027

Cancel

Submit

When you click 'Submit', a new ops log entry will be created. The subject of the entry will be the Team's name in beacon and include entered message. The entry will have the radio tag applied to it. If you have created the radio log against an incident, the message will be visible in the 'Notes' / 'Ops Log Entries' section of the related incident.

LAD Overview

Send SMS

When you click the 'SMS' button, the 'Send SMS' popup will open. This popup will display all members of the team and their SMS phone numbers from their Beacon contact details.

You have control over which recipients receive the SMS by selecting or unselecting the check box next to each member. When you click 'Send' the entered message will be sent to the selected recipients.

If you select 'Operational' to Yes, it will be identified as an operational SMS in the beacon message register.

LAD Overview

New Ops Log

When you click the 'Ops Log' button the New Ops Log popup will open. This dialog works identically to Beacon Notes. You can select tags, enter a subject and text to create a note. This note can be against an Incident (if you open it from an incident it will automatically be attached to that incident). A team can also be entered to auto-populate the subject with the team's name.

You must select at least one tag and enter text in the 'Text' field. Once you have entered your information you can click 'Submit' to create the ops log entry.

Tasking Teams (Instant Task)

When you click the 'Task Team' button, the team tasking popup will open. This popup will display a list of filtered teams. You can use the search bar to search for the name of a certain team. The Instant Task will display teams based on their geographic distance to the incident (Only works for Geocoded incidents and is calculated from the Team's Primary Matched Asset.).

Each team displays:

LAD Overview

- Number of current taskings and the types of tasked incidents (flood rescues will show their categorisation number as well)
- Distance (straight line distance)
- Compass bearing (from the incident)

Filter teams...

PAR32

Fodder Drop: 1
1 tasking(s) • 1.5 km • ← 253°

PAR56 + PAR914

Fodder Drop: 1, Storm: 1
2 tasking(s) • 1.5 km • ← 253°

PAR56

Storm: 1, Support: 3
4 tasking(s) • 1.5 km • ← 253°

PAR RECON

0 tasking(s) • Team location unknown

Instant Task Suggestions

Entries in the Instant Task list may contain a blue robot icon. This indicates this is an 'Instant Task Suggestion'. Instant Task Suggestion tries to find the most appropriate team based on weighting set within the [Configuration Screen](#). It differs for Rescue and Non-Rescue Incidents. For example, Rescue incidents by default are set to weight untasked teams higher than far teams – meaning it may show a team that is geographically further away.

Tasking the Team

When you click the desired team, you will receive a tasking confirmation with three options available:

- Cancel
- Task & SMS Details
 - Tasks the team to the incident and opens the 'Send SMS' popup, with that team as the recipients. The Message will be prefilled to the incident details, like the message generated by beacon when creating the incident.

LAD Overview

- If you cancel the 'Send SMS' prompt, it only cancels the sending of an SMS. The Team will still be tasked to the incident.
- Task

Drag & Drop Team Tasking

Incidents from the Incident Register can be dragged onto the Teams in the Team Register to task them to the incident. To drag an incident, you will have to click and hold whilst your mouse is hovered over the blue '+' or '-' icon at the left side of the Incident row. It can then be dragged onto a row. Incident Popups on the Situation Map can also be dragged onto a Team in the Team Register to task that team to the incident.

The Team Register is in the top left corner of LAD. It contains all filtered teams and displays information relating to those teams. Each **Team row** will display:

- Callsign
- Status
- HQ (Assigned HQ)
- Task Count
 - Displays current active taskings (Tasked, En-route, On-site and Off-site).

Team Register

■ Team Leader

The Teams Register can be sorted by the Callsign, Status, HQ and Task Count column by clicking the column name to swap between ascending and descending sort mode.

Each Team row has a set background colour to indicate the current tasking load of the team. It can be utilised to quickly scan for teams that are available, or could soon be available for further tasking, as well as identifying teams who may be overloaded, or are yet to complete their taskings in Beacon.

Note that the task count includes taskings to incidents outside of the set incidents filters in LAD (such as local Storm incidents when you have your filter set to only Flood Rescues).

- Green: No active taskings.
- Yellow: 1-2 active taskings.
- Red: 2+ active taskings.

⬆	Callsign ⬆	Status ⬆	HQ ⬆	Task Count ⬆	Team Leader	Actions
+ ★	PAR RECON 	Activated	PAR	0 Active	Rowan Macdonald	   
+ ★	PAR32	Activated	PAR	1 Active	Sandy Watts	   
+ ★	PAR56 + PAR914	Activated	PAR	3 Active	Tim Dykes	   

If a team cannot be matched a radio asset on the situation map, a car icon with a cross through it will show next to their callsign. The map focus crosshair will also be disabled. Team Radio Asset matching is explained in [Setting up a Team for Radio Tracking](#).

Expanded Team Details

Additional team information and a taskings list can be found by expanding the Team row. You can expand the Team row by clicking anywhere on the team row. Once expanded, a list of the Team members (including Team Leader) will be listed, including their member capabilities. The team's list of taskings will also be displayed.

The Taskings list will be filtered by the 'Tasking Status' filter. Displayed will be all tasked incidents (taskings) matching that filter, including incidents that may be outside of the set Incident Filter. The default filters will display Tasked, Enroute, Onsite and Offsite statuses.

0014-4927	Storm	O'CONNELL STREET, NORTH PARRAMATTA, NSW	Tasked	🔊+ ✉ 📄 👤

Matched Assets

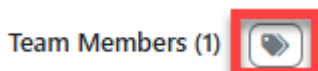

The Expanded Team Details also displays a list of each matched radio asset in the bottom left corner which can be clicked to zoom to a certain radio asset on the situation map.

Each team will have a **Primary Matched Asset**, this is indicated by the golden star next to that matched asset. The Primary Matched Asset will be used to track the location of the team for the purpose of features such as Instant Task (which takes distance into account) as well as displaying the driving route from the team to an incident.

You can change the primary radio asset by selecting the star icon against the desired radio asset. This setting is synced across all LAD users every refresh cycle. This means if one LAD operator changes the primary matched asset, it will be updated for all others users on the next refresh.

Toggle Member Capability

Member Capabilities can be toggled by selecting the tags icon to the right of the Team Members heading. This will default to hidden.

Team Row Actions

Each Team Row has four available action buttons.

Team Register

- Radio Log
 - Opens the '[New Radio Log](#)' popup to create a radio log against the team.
- Message Team
 - Opens the '[Send SMS](#)' popup and pre-fills the recipients to the team members.
 - This button will be greyed out if there are no members added to the team.
- Open in Remote Tab
 - This opens the Team's edit page in the [beacon remote tab](#). From there you will be able to perform actions such as editing the team's name or members.
- Focus on map
 - If the Team's name matches to a radio location, clicking this button will focus the Situation Map to that radio's GPS location. If there are no matched radios it will be greyed out.
 - If multiple radios are attached to one team, the focus button will display the number of matched radios, and when clicked will toggle between them. 2
 - If a single radio has been matched against multiple teams, it will display a yellow group icon. 

Team Taskings

The Team Taskings section displays incidents tasked to that team. Only incidents within the configured LAD filters, and within the configured LAD Tasking Statuses (e.g. On-Site, Off-Site) will be displayed. If there are incidents tasked to the team that are not within your LAD filters, next to the 'Taskings' heading a '(x hidden)' message will be displayed to indicate how many additional incidents the team is or has been tasked to, that are outside of the LAD filters.

Refresh

Team Tasking Details can be refreshed by clicking the 'Refresh' button.

Reordering Taskings

The order of taskings can be changed. To enter reordering mode, click the reorder button.

You can now reorder incidents using the 'Up' and 'Down' arrows next to each tasked incident.

Team Tasking Actions

Each Tasking on an incident for a team has four available actions:

Taskings (1 hidden)

↺ ↻ ↷ ↶

#	Type	Address	Status	Actions
0014-0146	Fodder Drop	CHURCH STREET, PARRAMATTA, NSW	Tasked	🎤+ ✉️ ↗️ 🌐

Team Register

- Radio Log (against the Incident)
 - Opens the '[New Radio Log](#)' popup. This radio message will be logged against the selected incident and automatically include the team's callsign.
- Message Team (against the incident)
 - Opens the '[Send SMS](#)' popup. The SMS recipients will be pre-filled with the team members and will be associated against the selected incident.
- Open Incident in Remote Tab
 - This opens the incident in the [beacon remote tab](#).
- Focus on map
 - If the incident is geocoded and is within the incident filters, clicking this button will focus the Situation Map to the incident.
 - If the Incident is outside of the set incident filters, it will not be displayed on the map, and the button will be greyed out.

Tasking Status

Each tasking displays its status. The status can be updated by clicking on the status, which will open a dropdown menu allowing you to select a new status. Some statuses may require you to enter additional information.

Taskings (1 hidden)  

#	Type	Address	Status	Actions
0014-0146	Fodder Drop	CHURCH STREET, PARRAMATTA, NSW	Tasked	   

- Remove Tasking
 - Only available when in the 'Tasked' status.
 - Removes the tasking from the team.
- En-Route
 - Requires a time set, which is automatically set to the current time but can be overridden by ticking the override button to enter your own time.
 - Allows for an ETA to be set. Quick ETA buttons allow for quick increments to be added. When the ETA is blank, clicking a Quick ETA button will take the time set value and increment it by the selected amount.
- Call Off
 - Requires a reason to be entered.
- On-Site

Team Register

- Requires a time set, which is automatically set to the current time but can be overridden by ticking the override button to enter your own time.
- Allows for an ETC to be set. Quick ETC buttons allow for quick increments to be added. When the ETC is blank, clicking a Quick ETC button will take the time set value and increment it by the selected amount.
- Off-Site
 - Requires a time set, which is automatically set to the current time but can be overridden by ticking the override button to enter your own time.
- Complete
 - Opens the 'Team Completion' popup for that team in the [beacon remote tab](#).

Incident Register

The Incident register is in the bottom left corner of LAD. It contains all filtered incidents.

Each incident row displays:

- Incident ID
- Received Date & Time
- Assigned HQ
- Incident Type
 - For Flood Rescue Incidents, the incident type also displays the flood rescue category 1-5. E.g. a 'Critical Assistance'/category one flood rescue would be displayed as 'FR-1'.
 - For Flood Support incidents, the sub-type will be displayed. For example, a medical resupply flood support incident would display 'Medical Resupply'.
- Status
 - When tasked, the status will also display the number of taskings for that incident (including completed, called off and untasked teams).
- Address
 - For geocoded incidents, the address can be clicked to focus the Situation Map to that incident.

Each Incident row will also have a set background colour to indicate the priority of the incident.

- White - General Response
- Yellow - Priority Response
- Blue - Immediate Response
- Red - Rescue/Life-threatening.

Incident Register

Incident Actions

Five action buttons are available in the expanded incidents details section.

- Task Team
 - Opens the ['Instant Task'](#) Popup.
- Target Teams
 - Clicking this button will automatically locate the closest teams and provide the distance (as the crow flies) from the team to the incident.
- Timeline
 - Opens the ['Incident Timeline'](#) dialog.
- New Ops Log
 - Opens the ['New Ops Log'](#) dialog.
- Open Incident in Remote Tab (Edit)
 - Opens the incident in the [beacon remote tab](#).

Incident Taskings Actions

In the Taskings List under an incident, against each team tasked to the incident four actions are available. These actions are identical to the actions in the taskings list in the team register.

- Radio Log (against the Incident)
 - Opens the ['New Radio Log'](#) popup. This radio message will be logged against the selected incident and automatically include the team's callsign.
- Message Team (against the incident)
 - Opens the ['Send SMS'](#) popup. The SMS recipients will be pre-filled with the team members and will be associated against the selected incident.
- Open Incident in Remote Tab
 - This opens the team in the [beacon remote tab](#).
- Focus on map
 - If the Team's name matches to a radio asset, clicking this button will focus the Situation Map to that radio's GPS location.

Incident Register

Team Statuses can also be updated as per the procedure for [updating tasking statuses in the Team Register](#).

Incident Timeline

The Incident Timeline dialog displays all ops log entries (notes), tasking status updates and incident status updates for the selected incident. It is a combination of the 'Notes' and 'Incident Timeline' sections of the Beacon Incident page.

Incident History Ops Log Important ICEMS Both Incident History Ops Log Close

There are three display modes of the Incident Timeline:

- Incident History
 - Displays all incident status updates, and tasking status updates.
- Ops Log
 - Displays all ops log entries (notes) for that incident.
- Both
 - Displays ops log entries and the incident history.

Incident Register

The Incident Timeline is sorted from newest updates (top) to oldest (bottom). Each entry has an associated colour to differentiate between incident history, ops log entries, important (urgent) ICEMS messages and non-urgent ICEMS messages.

The Ops Log section of the incident timeline can be filtered by selecting from the tags at the top of the Timeline. The Filter is an 'AND' filter. This means ops log entries will only be displayed when they contain **ALL** the selected tags.

ICEMS Functionality is explained in the [ICEMS](#) section.

Action Required Tags & Resolving Action Required Notes

Notes with an outstanding action required tag will have a 'Action Required' message, and a 'Resolve' button.

Acknowledge

The Situation Map is on the right side of the screen. The Situation map will display all filtered incidents as well as certain filtered teams. The Situation Map allows for incidents and teams to be represented visually, increasing the information available for tasking and decision making.

The different types of information displayed on the map (incidents, assets [radios], layer icon and layer polygons [area]) have a hierarchical order as to the priority they are displayed. Layers which are above other layers will be displayed over any lower ranking layer.

These settings can be set on the [Page Configuration Screen](#). The default setting is (top to bottom): Incident markers, asset markers, overlay icons and overlay polygons. This means that Incident markers will always take precedence and will be displayed on top of any other icons.

Incident Clustering

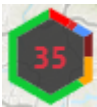

Incidents can also be clustered to increase ease of access and to address overlapping addresses. Incident Clustering is enabled by default. Incident clustering will cluster in two separate situations:

- When Incidents are at the same Address / GPS Location

Situation Map

- This assists in preventing incidents from being missed when they are stacked on top of each other at the same address or location. Clustering will instead display how many incidents are logged at the location.
- Incidents that are too close to each other.
- As you zoom out, incidents that are within a set distance from each other will be clustered together. This increases readability of the map when zoomed out.

Clusters will display as a hexagon. The number inside the hexagon represents the number of incidents within that Cluster. A red number indicates that at least one rescue incident is within the cluster.

The colour around the border indicates the various priorities of incidents within the cluster – like a pie chart. The colours are identical to the colours used for incident priorities as displayed in the [Legend](#).

For example: if there are 20 incidents in the cluster, half the border is green, a quarter is blue and a quarter is yellow – that translate to 10 incidents are general, 5 are priority and 5 are immediate.

Incident Status on Markers

When enabled in settings (On by default), additional icons will be displayed on top of the incident markers to display additional incident information.

- Unacknowledged Incidents

- Unacknowledged Incidents will emit a yellow pulsing circle.

Situation Map

- This will also apply to clustered markers when an incident inside the cluster is unacknowledged.
- Active (*not tasked*)

 - Incidents in the 'Active' status will have a rotating purple dotted line around them.
- Tasked
 - Incidents in the 'Tasked' status will display no special or unique indicators.
- Referred, Completed and Finalised

 - Incidents with the 'Referred', 'Completed' and 'Finalised' status will have a black diagonal line crossed through the icon.
- Cancelled and Rejected

 - Incidents with the 'Cancelled' or 'Rejected' status will have a black cross through them.
- Action Required

 - Incidents with an outstanding action required tag, regardless of status will display a red exclamation mark.

Map Control

Zoom

In the top left corner of the Situation Map, map control buttons are available. The map can be zoomed in by clicking the '+' and '-' zoom buttons or by scrolling the mouse wheel.

Panning

The map can be panned by clicking and holding the left mouse button or middle mouse button and dragging the mouse.

Situation Map

Minimap

In the bottom right corner of the Situation Map is the Minimap. The Minimap shows the area that is displayed in context to the wider area. It can also be used to drag the map view around.

The Minimap can be hidden and expanded by clicking the arrow in the bottom right corner of the Minimap.

Hiding All Popups

When hold the 'Spacebar' key, all popups will temporarily be hidden. Once released, all opened popups will reappear. This is helpful for being able to quickly view the map without anything in the way.

Measuring Tool

The Measuring Tool allows for the distance to be measured between multiple locations. Multiple separate measurements can be kept on the map simultaneously.

To select the measuring tool, click the ruler icon on the left-hand side of the Situation Map. Then click two or more points on the map. The distance between each marker will be displayed as a green number, and the overall distance between all markers will be displayed by a blue number.

Markers can be deleted by holding down the "SHIFT" key and clicking on the marker.

If you click the "ESC" key, you will be able to start a new set of measurement markers.

To turn off the Measuring Tool mode, click on the "ruler" icon to disable it, or hit the "ESC" key twice.

The "X" icon under the "ruler" icon on the left-hand side of the Situation map will clear all measurements from your screen.

Address Search

You can search the map for addresses via the 'Address Search' feature. This can be opened by right clicking on the map and selecting 'Address search' or by selecting the Search Tool on the map control pane.

Situation Map

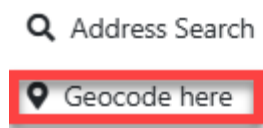

You can then enter an address, and results will automatically appear in the results field. Selecting an address in the results or pressing 'Enter' will take you to that address on the map.

72 North Rocks Rd, North Rocks NSW 2151, Australia

Creating Incidents from the Map

You can create an incident from a map location using reverse geocoding. Find the location on the map you wish you create the incident for, right click and select 'Geocode here'.

The map will now display the closest mappable address locations to where you clicked. The location you selected will be displayed by a red pin, and all found addresses will be displayed by a blue pin on the map.

Clicking anywhere on the map will cancel the Geocode Search, and the pins will vanish.

When you select a blue pin (an address), information will be displayed about that location. The Address of the location will be displayed, the distance to your red pin (where you selected to search from), the address type (e.g. PointAddress or Street), the area and GPS coordinates.

Create Incident

If you click 'Create Incident', the 'Create New Incident' page will be opened in your [Beacon Remote Tab](#) with the address pre-filled. You can then proceed with creating the incident as normal.

Situation Map

Layers

Layers control the information displayed on the Situation Map. The Layers menu can be opened by clicking the layer button in the top left corner of the Situation Map.

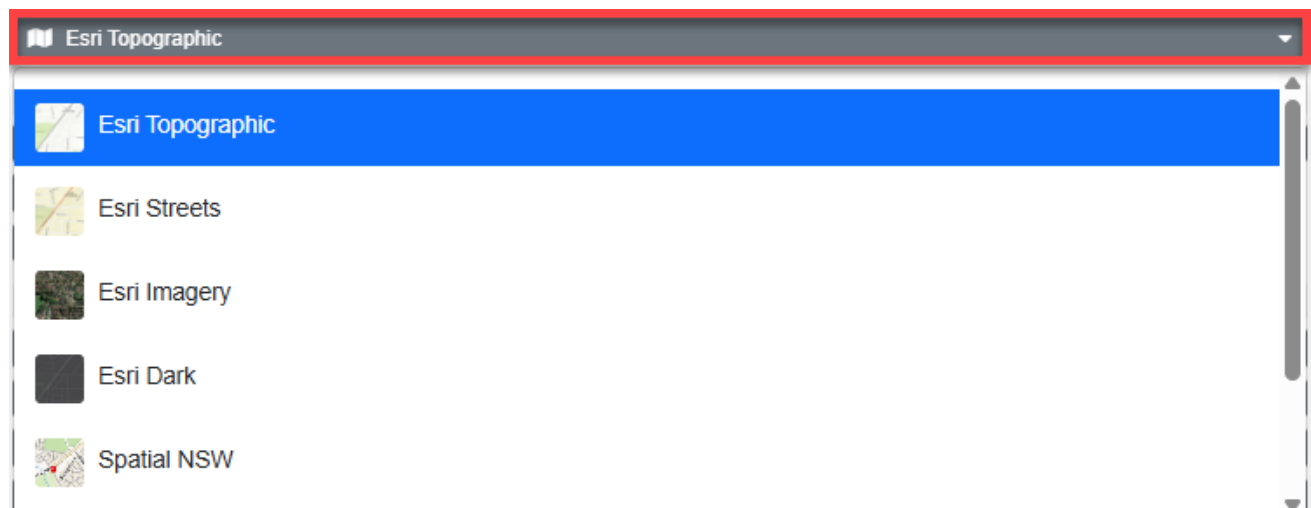

Basemap

The Basemap determines the street map that is used for the map. The default option is the 'ESRI Topographic' basemap. Basemaps are available from both ESRI, SPATIAL NSW and SIXMAPS, providing street maps and satellite imagery maps.

Note that not all Basemaps have data for certain levels of zoom. If you zoom in too far, and the selected Basemap does not have data for that level of zoom, it will display the ESRI Topographic basemap until you zoom out.)

To select your basemap, open the 'Layers' menu and open the Basemap dropdown, and pick the desired basemap.

Situation Map

Overlays

Overlays sit on top of the Basemap to provide additional information. Layers can be toggled on and off within the 'Layers' menu. You can also search for a specific layer using the search bar at the top.

Layers displayed on the map may have additional information available by selecting it. E.g. selecting a HazardWatch layer on the map will provide you with the full warning details.

Most layers are appropriately described by their name. Layers that require additional details:

Assets

- Matched against Teams

Situation Map

- Displays all radio assets that match against a team.
- Only radio assets that have reported in their location within the last 24 hours will be visible.
- Unmatched against Teams
 - Displays all radio assets that are not matched against a team. These icons will appear with grey text. If they have not reported data within the last hour the icon will also be faded.
 - Note that this layer can cause slowness and is not recommended to be left on.

NSW SES Geoservices

- Filtered Unit Boundaries
 - Overlaps a Pink outline around the filtered headquarters.
- NSW SES Zone Boundaries
 - Overlaps a map of SES Zone boundaries.
- Unit/Zone Boundaries Hybrid
 - Overlaps a map of SES Zones & Unit boundaries.
- Active FRAOs
 - Overlaps a map of any active FRAO declarations (pulled from the Beacon FRAO register)

HazardWatch (Hazards near me)

- SES Hazard watch products
 - Displays Floods, Tsunamis, Severe weather, Coastal Erosion and Snow warning products.
 - Clicking on a warning product will open a product with the published warning product details.

For more information on the information and warnings refer to the [Public Information Manual](#).

Lighthouse Geoservices

- SES Unit Locations
 - Displays the location of all SES Unit Headquarters.

Situation Map

Legend

The Legend is found in the bottom left corner of the Situation Map. It can be hidden and re-opened on demand. It provides a legend of Icons displayed on the map.

Situation Map

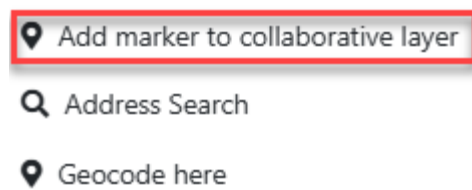

Collaborative Map Layer

Collaborative Map Layers allows your users to place markers on a map that is viewable by other users.

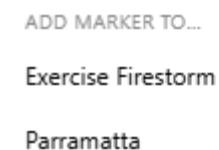

You can create or subscribe to an existing layer in the [Configuration Screen](#).

Adding a Marker

When you right-click on the map, you will open the map context menu. New markers can be added by clicking “Add marker to collaborative layer”.

If you are subscribed to multiple layers, you will be prompted to select the layer to add the marker too.

You can then select the marker icon and colour, as well as enter a title and description. Clicking ‘Save’ will create the marker.

Viewing and performing actions on a marker

When you click on a marker on the map, you will open the marker. You will be able to see the associated information and comments.

Situation Map

If you want to edit or delete the marker, you can use the respective buttons.

If you want to leave a comment, type your comment into the text field and click the 'Comment' button.

Situation Map

Incidents

All filtered incidents are displayed on the Situation Map. Incidents will have varying shapes and colours, dependant on their incident type and priority. Clicking on an incident will open the Incident details popup, which will display the incident details as well as selecting the incident in the Incident Register.

Displayed Incident Details:

- Incident ID
- Incident Type & Status
- Incident Priority
- Outstanding Action Required Tags
 - If the incident has any outstanding notes with the Action Tags, they will be displayed.
- Incident Address
- Situation
- Incident Tags
- Tasked Teams
- Date & Time Received
- Assigned HQ

Parramatta

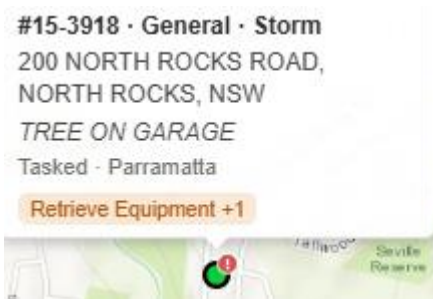

The Incident popup can be closed by clicking the cross in the top right corner, or by clicking elsewhere on the map. If you hover your mouse off the popup, the background will become slightly transparent, allowing some visibility of the map behind it.

Situation Map

Hover on Incident on Map

When you hover over an incident on the Situation Map, a popup will appear containing incident information, including address, situation on scene and, any outstanding action items.

Incident Popup Actions

Eight actions are available on the Incident popup across two sections of the popup.

Incident Details Section

- Task Team
 - Opens the [‘Instant Task’](#) popup.
- Incident Timeline
 - Opens the [Incident Timeline](#).
- New Ops Log Entry
 - Opens the [New Logs Log Entry](#) popup.
- Open Incident in Remote Tab
 - This opens the incident in the [beacon remote tab](#).
- Refresh Incident
 - Refreshes the details for this incident. Updates all information and any changes in tasked teams and their statuses.

Situation Map

Incident Taskings Section

Team	Status	Updated	Actions
PAR31	Enroute	1h 1m ago	 

- Team Row (each tasking row)
 - Clicking the row will zoom to the team's location (if available).
- Team Status (each tasking row)
 - Clicking the status will open the new status dropdown menu – identical to the incident and team register.
- Route to Asset (left button)
 - Displays a road route from the team's current location to the incident, providing an approximate ETA.
- Fit Bounds (right button)
 - Zooms in as far as possible whilst keeping the Team and Incident in the map view.

Situation Map

Teams

The Situation Map has the functionality to display the location of Teams. This information is collected from the Radio GPS data attached to the team. This only works for SES issued radios. The Team and Incident Register contain action buttons to zoom to teams, if teams are not present on the Situation Map, they cannot be zoomed to.

When you click on a Radio Asset marker on the Situation Map it will display the details of the radio such as the last time seen, as well as what team it's associated to, and any taskings for that team.

Every Incident tasked to that team will be displayed. Each Tasking will have two buttons:

- Route to Asset (left button)
 - Displays a road route from the team's current location to the incident, providing an approximate ETA.
- Open Incident in Remote Tab
 - This opens the incident in the [beacon remote tab](#).
